

McAfee One Time Password Server

Multifactor authentication for secure login

McAfee® One Time Password Server provides strong authentication for remote access to high-value organizational IT resources, hosted applications, websites, mail servers, and online transactions. Fast and easy to install, configure, and maintain, this McAfee strong authentication solution secures access to business critical information anywhere it's stored or accessed.

Features

Added security

McAfee One Time Password Server brings the security of two-factor authentication to your Juniper Networks solution.

Untouched infrastructure

With McAfee One Time Password Server, there is no need to alter your infrastructure. It will work as an add-on.

Flexible authentication

Adapt the authentication method to meet your users' needs. We support both online and offline methods.

McAfee One Time Password Server at a Glance

McAfee One Time Password Server provides strong authentication in a cost-efficient way that is easy to use. It can be implemented in just about any operating system, helping you to secure your system with minimal investment.

McAfee One Time Password is easy to use and quick to install:

- User-friendly McAfee One Time Password authentication with SMS or software token pledge
- Fast and simple integration and deployment into existing environments
- Lifecycle management through self-enrollment and self-administration
- Flexible and intelligent user repository functions

McAfee One Time Password provides customers with low total cost of ownership:

- Minimizes administration with integration to existing user management
- Migration support from legacy hard tokens
- Automated key enrollment with software token pledge
- Lowers total cost of ownership compared to hardware token solutions

McAfee One Time Password is innovative, flexible, and future-proof:

- Supports multiple OTP delivery methods
- Industry-leading device software token pledge
- Supports Intel Identity Protection Technology (IPT)
- Highly scalable, with millions of users
- Support or secure gateways predesigned custom interfaces

McAfee One Time Password Server brings the security of two-factor authentication to multiple security technology solutions, including: Check Point, Cisco, Citrix Access Gateway, Citrix Web Interface, Episerver, Intel Expressway Cloud Access 360, Juniper, Microsoft IIS, Microsoft ISA Server, Microsoft Outlook Web Access (OWA) and Microsoft SharePoint.
